

Asbestos Annual Summary

Asbestos Amounts for All Planned Abatement Projects

Instructions:

1. Briefly describe **all planned** asbestos abatement projects for the upcoming calendar year that fall below the threshold quantities of regulated asbestos containing material (RACM) in Column I. Include the type of abatement, facility name and number where the abatement will take place, type(s) of procedure to be used, waste transporter, waste disposal site, and job numbers, if known and applicable. Use a different row for different abatement projects.
2. In Column II, include the name, phone, address, and license number (if known) of the contractor performing the abatement.
3. For each project, please quantify the total amount of RACM in the proper column. If the RACM is found in surfacing material, use Column III. If the RACM is found on pipes, use Column IV. If the RACM is on any other facility component or where the length or area could not be measured previously, use Column V. If the project is removing RACM in more than one category, please keep the totals in the appropriate columns.
4. Please use the electronic form so that the information conforms to the row and use as many rows or forms as needed.
5. Please submit all completed form(s) to the Environmental Program Branch (EPB), Mail Code: TA-C3.

If further assistance is needed, please refer to the federal (40 CFR Part 61) and state (F.A.C. 62-257) asbestos regulations or contact the EPB.

Column I	Column II	Column III	Column IV	Column V
Description of Abatement Project	Contractor Information	Amount of RACM off surfacing material (square feet)	Amount of RACM off pipes (linear feet)	Amount of RACM off facility components or where the length or area could not be measured (cubic feet)
